SUMMARY

Motivated and detail-oriented Cybersecurity Fresher with a strong interest in Red Team operations, offensive security, and digital forensics. Possess hands-on academic and lab-based exposure to web application and network penetration testing, OSINT investigations, malware analysis, and incident analysis. Demonstrated ability to simulate real-world attack scenarios in controlled environments to identify security weaknesses and understand adversary tactics, techniques, and procedures (TTPs). Actively learning and staying updated with emerging cyber threats, attack methodologies, and defensive evasion techniques.

EXPERIENCE

Cybersecurity Practical Experience (Labs & Self-Practice) Fresher | Self-Learning & Lab-Based Experience

- Performed network reconnaissance and enumeration using tools like Nmap and Wireshark to analyze open ports, services, and potential attack vectors.
- Practiced basic exploitation techniques in virtual labs to understand initial access and privilege escalation concepts.
- Conducted OSINT investigations using open-source tools and public data sources to collect digital footprints and support target profiling.
- Developed foundational understanding of digital forensics, including disk artifact analysis and basic memory investigation techniques.
- Studied real-world attack techniques and adversary TTPs by mapping activities to the MITRE ATT&CK framework.
- Worked with Linux and Windows environments to understand system behavior, user permissions, and security misconfigurations.

SKILLS

- penetration testing
- network pentesting
- Api pentesting
- web applications pentesting
- doxing
- OSINT
- Malware planting
- bug bounty
- social engineering
- digital forensic
- Darkweb OSINT
- problem solving
- project management
- mobile forensic
- team collaboration

EDUCATION

Expected in 01/2026

pursuing:-

Architecture and network security

Gujarat University
